Setting Up Your Catalina MacBook for Audio Plugins & Repair.
1. I will need your Apple ID, computer username, and password. (feel free to change it beforehand if you'd like because I will have to use it many times throughout the process).

   Example: EMATiON@BluntRaps.com is my Apple ID.
   George Winchester III (is my username on my Mac) & 2f7kn99A is my password.

2. Go to www.TeamViewer.com download and sign up for a free account. After you install go to the Apple icon in your top left hand corner click System Preferences, then click, Security & Privacy. Next click the lock in the bottom left to make changes and enter your password.

3. Go to the Firewall tab, make sure it's turned off. Go to the Privacy tab then locate the **Full DIsk Access** - click the **+** to add an app then go to your applications folder and select **TeamViewer**. Same thing for the **Accessibility** tab click the **+** to add an app then go to your applications folder and select **TeamViewer**

4. Now all you need to do is open TeamViewer and send me a picture of your ID & password it generated. Please make sure Start TeamViewer with System is selected. When I connect to your system it may ask for approval on your end.

5. It's important to make sure that you have an external harddrive plugged into your computer as well. It's best to run ProTools / Logic sessions from an external drive and I also have a great deal of my plugins and applications installed on my external as well. It keeps your computer running well.

6. Upon completion I will return all your settings to normal and restart your system. You are paying for my service and time to repair your computer. At the studio the typical rate is $100 per hour and $50 an hour for me engineering. I charge anywhere from $300-500 for my services and guarantee your results. If you use ProTools only the Waves & T-Racks AAX are compatible. If you use Logic Pro there's many more options but still limited compared to a Windows computer. I also have some of the best presets and templates available from sessions at the W. These plugins and presets will be coded for your system so please don't pass them to friends as it may cause conflict with the licenses. Thanks for letting me hook up your system and looking forward to listening to some of the music you create!
